Installation Instruction
for Gate Closer

(Weight limit per closer up to 120 lb.)

1. Measure the center position by the positioning mark (is 9 3/4" from the column edge) and secure it on the door face.

2. Pull off the end cover, slide the closer groove onto the roller, then push back the end cover.

3. Secure the bracket on the column.

4. Open the door slightly to let the holding pin drop off from the closer.

5. Adjust the door closing speed with the door open at about 45°.

6. Adjust the latching speed with the door completely closed.

7. To have the door operate with an "hold-open" mode, simply remove the screw from the hole "A" and attach it to hole "B". Do not attempt to force the closer beyond the screw. Doing so may damage the closer.
